Buildings for People

Warren Overton
Managing Director, Viridis E3

Green Cities Conference 2011

Why Build *for* People?

- The significant benefits of building comfortable and productive buildings are well known, well documented, and accepted.

Education Buildings

- In the educational context buildings are even more important because of developing minds and bodies.

Reversal of Autism?

- *...generally within a few weeks of a simultaneous complete dietary change and complete environmental change, the physical manifestations of autism can be eliminated.....K. Slimak, 2002.*

- So once we have delivered a 'healthy' building – what then?

People for Buildings

A New Mindset

- Only once we recognise and embrace the interaction between ourselves and our buildings (aka the environment around us) can we achieve real sustainability.

So how do we do this?

Interactive Building Systems

- Allow users control and interaction
- Write the users manual - and then get people to read it!
- Continually review, refresh and retrain.

Bring the Outside In

- Create connections to the environment
- Acclimatise to the prevailing conditions

Manage the Complete Building

- Monitoring and Measurement
- Reporting
- Learning and Tuning

*Facilities Management
= people + buildings*
